Datawarehouse / Business Intelligence Consultants
Software Development Team

Responsibilities:

- Assess and cultivate long-term strategic goals for BI development in conjunction with end users, managers, clients, and other stakeholders.
- Direct, organize, and lead projects in the implementation and use of new BI software tools and systems.
- Lead the integration efforts for merging BI platforms with enterprise systems and applications.
- Design, code, test, and document all new or modified BI systems, applications, and programs.
- Develop the semantic layer, metadata, reports, and report definitions.
- Develop graphs and portal interfaces.
- Assist in the design of databases and data warehouses to ensure interoperability with BI solutions.
- Analyze user requirements and, based on findings, design functional specifications for BI front-end applications.

- Produce ETL design guidelines to ensure a manageable ETL infrastructure for the BI system.
- Work with project managers to ensure that data entry, retrieval, change and delete functions meet business requirements for project completion.
- Conduct job duties and responsibilities according to the organization's business systems development methodology and/or its Systems Development Life Cycle (SDLC) methodology.
- Design and deliver end-user training and training materials; provide technical support as necessary.
- Troubleshoot BI tools, systems, and software; performance-tune these applications as necessary.
- Act as evangelist for BI benefits across the organization; promote BI usage to relevant departments.
- Evaluate and select database/data warehouse components, including hardware, relational database management systems, ETL software, metadata management tools, and database design solutions.
- Conduct research and make recommendations on BI products, services, and standards in support of procurement and development efforts.
- Mentor and/or provide leadership to junior members of the team.

Requirements:

- Degree or higher in the field of computer science, information systems, or computer engineering or related field.
- Good knowledge in Database Design
- Passionate in understanding data
- Comprehensive data warehouse analysis and design experience, with full knowledge of data warehouse methodologies and data modeling.
- Experience with tier-one applications, databases, and data warehouses, such as Oracle 9i, MS SQL Server, Crystal, SAP, SCM, and so on.
- Strong ability to analyze user requirements. Possess strong logical thinking
- Experienced in Data Warehousing Project or knowledge in Data Warehousing Lifecycle is an added advantage
- Strong knowledge in SQL Server 2005/2008 Integration Services, SQL Server 2005/2008 Reporting Services, SQL Server 2005/2008 Analysis Services
- Fresh graduates or candidates without experience, but with good attitude and ability to learn quickly are encouraged to apply.
